

Environment Friendly, High Speed, High Efficiency, Energy Saving,
Labor Saving and Time Saving=Making Money

Making Money is the Absolute Principle.

Eliza Green Integrated Laundry System Introduction:

Eliza Green Integrated Washing System(EGS is for the abbreviation). This system consists of the logistics system, automatic loading & unloading system, automatic detergent adding system, high speed & efficiency automatic loading & unloading drying system, quick feeding, ironing and folding system, the recycle of water & detergent system, the recycle of heat energy(steam & hot air) system, the integrated automatic central computer control system. This integrated washing system has many original and innovative technologies such as intelligent fully enclosed high speed & high efficiency heat recycling of preheating zone, super energy-saving automatic loading & unloading dryer, the four level energy & efficiency utilization technology(The lowest energy consumption and original in the industry). The comprehensive energy saving is up to 55%.

Washing Machine has a forward & backward large tilt angle of 25 degrees automatic loading & unloading technology(original). It also has automatic loading & spraying technology. The single line washing and drying capacity of this integrated system with the comprehensive use of original & innovative technology can be up to 4320 KG/h. The high-speed flat-work ironer and folding machine's effective operation of the highest speed is up to 50 meters/minute. This system can save water fee by more than 70%, save detergent by 30%, improve production by nearly 100%, save labor cost by 85%(compared with other same scale washing machine).
